

JASSER CHERIF

+216 50 033 630 | jasser.cherif@ensi-uma.tn | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

AI Software Engineer specializing in Multi-Agent Systems, Large Language Models (LLMs), and Retrieval-Augmented Generation (RAG) for enterprise automation. Experienced in designing, building, and deploying production-grade agentic AI systems using LangGraph and LangChain, with end-to-end ownership from architecture and knowledge-graph design through CI/CD and deployment validation.

TECHNICAL SKILLS

Languages & Frameworks	Python, JavaScript, TypeScript, React, Node.js, Express, Spring Boot, FastAPI
AI / Machine Learning	LLMs, LangChain, LangGraph, RAG, GraphRAG, MCP, A2A
Databases & Vector Stores	Neo4j, MySQL, PostgreSQL, MongoDB, Supabase, Weaviate, Qdrant
DevOps & Tools	Git, GitHub, GitLab, Docker, Jenkins, CI/CD, SonarQube, LangSmith

PROFESSIONAL EXPERIENCE

AI Software Engineer Talan Tunisie	February 2025 – Present <i>Charguia 1, Tunis</i>
---------------------------------------	---

AgenticDoc – Agentic AI Platform for Automated Salesforce Documentation	<i>In Progress</i>
---	--------------------

- Architecting a production-grade **multi-agent LangGraph** system that analyzes Salesforce organizations and generates technical documentation using **Salesforce MCP**, **Neo4j** knowledge graphs, **PostgreSQL**, and **GraphRAG** with persistent agent memory.
- Developing a scalable **FastAPI** backend with asynchronous AI workflows, **GitHub OAuth**, **JWT** authentication, and AI-powered generation of documentation, ER diagrams, README files, and PDF reports.

TALOS – Multi-Agent AI System for Salesforce Bug Diagnosis and Resolution

- Architected a multi-agent AI pipeline using **LangGraph**, **FastAPI**, **React** and **PostgreSQL** that autonomously diagnoses and resolves **Apex**, **Flow**, and **sObject** errors for Salesforce development teams.
- Designed a Root Cause Analysis (RCA) agent with 9 specialized diagnostic tools and **LangSmith** tracing, and built a **RAG** pipeline on **Weaviate** that improved diagnostic accuracy by 30% and cut developer debugging time by 40%.
- Built a Salesforce CLI automation and pre-branch validation pipeline (dry-run deployment, scoped Apex test execution, coverage gating), and resolved 10+ critical defects in the LangGraph state-routing logic.
- Automated the fix-to-delivery workflow, generating **Jira** tickets and **GitHub** pull requests directly from validated diagnoses.

GraphTravelAssistant – Hybrid GraphRAG Travel Assistant

- Designed a Hybrid **GraphRAG** architecture on **Neo4j**, combining graph-based reasoning with semantic vector retrieval for accurate, context-aware question answering.
- Built an automated knowledge-ingestion pipeline with **Firecrawl MCP** and **LLMGraphTransformer** to convert unstructured web content into a structured, queryable knowledge graph.
- Developed scalable **REST APIs** with **FastAPI** and **LangChain**, serving hybrid retrieval over embedded document chunks stored in Neo4j.

FutureCover – AI-Powered Insurance Platform

- Built a full insurance service platform on the **Salesforce Platform** (Experience Cloud, Flow Builder, Apex), automating quote generation and contract creation via CongaSign and Visualforce.
- Integrated a fraud-detection engine (Isolation Forest, Autoencoder, XGBoost, Llama3-7B) using **Flask** and Python to score and flag suspicious claims in real time.

EDUCATION

Engineering Degree & Master in Smart Systems, National School of Computer Sciences	2022 – 2025
Engineering Preparatory Studies, Preparatory Institute for Engineering Studies of Nabeul	2020 – 2022
